****

A new policy article entitled "**Combating deforestation: From satellite to intervention**" was just published in **Science**, one of the leading journals in the world.

The authors include members of Amazon Conservation, World Resources Institute (Global Forest Watch), and Planet.

We first describe how rapidly improving **satellite** technology has created an unprecedented moment for near real-time monitoring.

We then outline a five-step **protocol** for near real-time tropical deforestation monitoring, with the goal of bridging the gap between technology and policy.
